**Product Name :**  
2000 SFR Apron

**Product Code :**  
LBNY-00017-11000450

**Description :**

2000 SFR Aprons provide chemical and secondary flame protection in a lightweight garment. 2000 SFR Aprons are intended to be worn over primary flame resistant garments.

The fabric used in 2000 SFR garments utilize a unique technology so that it does not char like traditional secondary flame-resistant technologies - it is designed to shrink away from flame without burning  
2000 SFR garments also provide an effective barrier against a range of inorganic acids, bases, industrial cleaning chemicals, and particles

2000 SFR represents a new generation of secondary flame-resistant chemical garment technology

Unlike traditional secondary flame resistant chemical garments that have been available for years, new 2000 SFR garments were specially designed to meet dual hazard needs of a protective chemical suit with secondary flame resistance

They're an ideal option for keeping workers safe from chemicals, while not compromising the flame protection of fire-resistance clothing worn beneath them

Applications include: refineries, petrochemical plants, laboratories, hazardous maintenance operations.

This unique combination of performance permits SFR garments to be worn over primary flame resistant (FR) garments like when chemical splash and flash fire hazards exist.

**Technical Specification :**

2000 SFR Apron
