Product Name :
Structural Engineering Learning System

Product Code :
LBNY-0005-1140002

Description :

The Structural Engineering 1 Learning System includes the Structural Testing Systems consisting of a workstation, bridge component sets, a test fixture set, indicator package, bridge designer software, supplemental CD, and interactive multimedia student curriculum. Civil engineers are responsible for creating structures such as skyscrapers, bridges, tunnels, dams, mass transit systems, water treatment facilities, and many more structures that we use every day for living, transportation, and industry. Structural Engineering 1 Learning System, introduces learners to the field of civil engineering. Learners will learn the fundamentals of structural analysis as well as bridge design and construction. These components are used to teach topics such as civil engineering careers, structural stability, force vectors, and bridge design.

Features:

Modular Structural Members
Structural Design Software
Interactive Multimedia.

Technical Specification :

Structural Engineering Learning System

Laboratory Instrument India
