Product Name :
Torsion Experiment Kit

Product Code :
LBNY-0005-1980001

Description :

Effect of rod length, rod material and J value on angle of twist. The Torsion Experiment Kit enables students to understand the relationship between torsion and the angle of twist for any given material.

Features:

Applied student Learning via Building and experimentation

Hands-on Learning

Multiple experimental capabilities per self-contained kit

Clear and concise pictorial assembly instructions enhance the learning experience

Tool-less assembly

Supplied with a detailed instruction manual, covering the theory of Torsion including multiple practical experiments designed to further develop the student's understanding in this field.

Technical Specification :

Overall Dimensions:

Tray:

Height: 0.430m

Width: 0.312m

Depth: 0.080m.
